

Environmental Promise

Metallogic Solutions Ltd.

Our commitment

Metallogic Solutions Ltd. is committed to minimising the environmental impact of its business activities and to conducting its work in a manner that is consistent with the principles of environmental responsibility and sustainable practices. We recognise that the industries we serve – including energy, materials processing and primary production – carry significant environmental responsibilities of their own.

Metallogic Solutions Ltd. takes seriously our role in supporting clients to make materials and processing decisions that are technically sound, resource-efficient and mindful of long-term environmental impacts.

Scope

This commitment applies to all activities undertaken by Metallogic Solutions Ltd., including office-based work, client site visits, business travel and the procurement of goods and services in support of our operations.

Our environmental promises

We will:

- Minimise unnecessary travel by conducting meetings and consultations remotely where the decision to do so will not compromise the quality of our service or our ability to deliver it.
- Where travel is necessary, select the most environmentally responsible mode of transport that is practical for the engagement.
- Operate a predominantly paperless office, preferencing digital tools for document management, reporting and client communication.
- Procure goods and services from suppliers who demonstrate a commitment to environmental responsibility where alternatives are available and comparable.

- Avoid unnecessary consumption of materials, energy and resources in our day-to-day operations.
- Stay informed of environmental legislation and relevant best practices for our activities (and those of our clients).
- Consider the environmental implications of materials recommendations – including embodied energy, recyclability and end-of-life implications – where relevant to the scope of an engagement.
- Review this commitment annually and update it as our activities and understanding evolve.

Our role as a metallurgical consultancy

Materials selection has a direct and meaningful bearing on environmental outcomes. The choice of alloy, processing route, coating systems, corrosion protection strategies and joining methods all affect energy consumption, emissions, recyclability and component longevity. Where it falls within our scope, Metallogic Solutions Ltd. will highlight environmentally relevant considerations as part of our technical advice – never as a constraint on performance, but always as an integral part of sound engineering judgment.

Responsibility

As Director of Metallogic Solutions Ltd., I take personal responsibility for ensuring this commitment is reflected in everything we undertake.

Environmental performance and our commitment to it will be assessed as part of our annual business review.

Signature

I, James Lennard CEng MIMMM, as the Director and accountable person at Metallogic Solutions Ltd., undersign this statement:

James Lennard
